Bethlehem, PA | [\(484\) 523-4431](tel:(484)523-4431) | rileybeenders@gmail.com | www.rileybeenders.com | linkedin.com/in/riley-beenders

PROFESSIONAL SUMMARY

Technology leader with 10+ years of multidisciplinary engineering experience and 5+ years across network deployment, IT infrastructure, and self-hosted platforms. Builds automation and tooling with PowerShell, Python, and Git-based workflows, administers Windows/Linux systems, and operates redundant Kubernetes, Docker, and Proxmox environments. Designs for least-privilege execution, integrity verification, monitoring and alerting, and root-cause troubleshooting, and leads technical projects independently while explaining complex systems to diverse audiences.

CORE EXPERTISE

Automation & CI: PowerShell; Python; Git/GitHub and GitHub Actions; WinGet package automation; scheduled tasks; workflow automation; macros; software and process standardization

Infrastructure: Windows/Linux systems administration; Kubernetes; Docker and containerized applications; Proxmox virtualization; virtual machine and container management; redundant self-hosted services; Vercel deployment

Security & Access: Least-privilege elevation design; one-time administrator approval; SHA-256 integrity verification; reverse-proxy and firewall routing; server network and VLAN configuration; DNS and subdomains; domain-based application access

Observability & Ops: Live monitoring and alerts; data logging and process analysis; tolerance and production metrics; web analytics; root-cause troubleshooting; risk analysis; technical documentation

Leadership: Independent technical project leadership; external software-partner and vendor collaboration; hiring and technical interviews; cross-functional technical support; worldwide collaboration; explaining complex systems to non-technical users

PROFESSIONAL EXPERIENCE

Proteor / Proteor Printing Solutions | Coplay, PA

January 2025 - Present

Lead, Research & Development Engineer

- Managed and expanded the division's IT infrastructure after the Proteor acquisition, deploying cloud gateways and standardizing software and internal processes to align with company-wide systems.
- Implemented ProteorPrint OS with external software partner SimplyPrint, contributing machine requirements and integration for remote operation, live video, AI-assisted diagnostics, and material, waste, and outcome metrics.
- Built an automated LabVIEW QC system that negotiates Modbus communication with three tri-axial laser sensors over a dedicated private VLAN, collecting nine data points (three per laser) every 17.5 ms and charting live tolerances.
- Automated QC reporting: each run generates a formatted PDF stored on a remote server under an ID that becomes a QR code on the product, making field issues traceable.
- Managed the Coplay site's Microsoft Business Central ERP rollout, syncing SKUs with Proteor's global locations.
- Performed risk analysis and mitigations to EU and U.S. standards across ProteorPrint hardware and cloud products.
- Act as Hiring Manager for engineering roles, conducting technical interviews and owning final hiring decisions.
- Provide cross-functional technical support for the product line, from troubleshooting to after-sales service.

Filament Innovations | Whitehall, PA

May 2020 - January 2025

Chief Technology Officer

January 2023 - January 2025

- Oversaw the product-development pipeline, internal IT infrastructure, and technology strategy while retaining hands-on responsibility for mechanical, electrical, firmware, and software systems.

- Designed and hosted a redundant Kubernetes cluster running a self-developed ERP/CRM for orders, inventory, tasks, projects, and customer interactions, with dynamic BOM generation linked to purchasing.

Lead Electro-Mechanical Engineer

June 2022 - January 2023

- Integrated a multi-board CAN-bus control architecture that simplified wiring and debugging while supporting larger, modular machines.
- Developed independently testable electronics enclosures that could be installed in minutes and coordinated custom harnesses, panel designs, and hardware improvements with vendors.

Industrial Engineer

April 2021 - June 2022

- Designed THE KRAKEN, a 1 x 2 x 1.5 m hybrid pellet-and-filament gantry system for a large-scale statue client, and managed CAD, BOM, sourcing, fabrication, assembly, firmware tuning, support, and training.
- Developed next-generation ICARUS and POSEIDON models with higher-performance components and expanded motion safety through NEMA 34 motors, planetary gearboxes, and power-failure brakes.

Engineering Technician

May 2020 - April 2021

- Diagnosed mechanical and electrical problems during assembly and operation, improving early product reliability.
- Tuned, calibrated, and optimized process parameters while documenting design limitations and opportunities for product improvement.

SELECTED PROJECTS

RB's Auto App Updater - PowerShell / Windows Automation | 2026 | One-line PowerShell install that upgrades every WinGet package through an elevated scheduled task: a non-elevated launcher calls protected worker scripts, admin approval is requested once at setup, per-package failures never stop the run, exit codes map to plain-language statuses, and self-updates install only after SHA-256 verification against a version manifest.

RileyBeenders.com - Full-Stack Portfolio Platform | 2026 | Built and deployed a TypeScript/React/Next.js site on Vercel with structured JSON content, a Node.js PDF endpoint, Git version control, GitHub Actions automation on every push to main, and web analytics.

Engineering Operations Platform - Kubernetes ERP/CRM | Filament Innovations | Redundant Kubernetes-hosted system connecting engineering design data to operations: centralized orders, inventory, tasks, projects, and customer interactions, and linked dynamic BOM generation to purchasing.

PROTEOR Print Integration - Remote Operations Software | Proteor | Single interface for remote operation and diagnosis from any networked device, delivered with an external software partner: live video monitoring, machine-vision AI-assisted failure detection and alerts, and tracking of material usage, waste, and print success or failure for analytics-driven decisions.

ExtrusionLine Studio - LabVIEW Metrology | Proteor | Replaced a manual measurement workflow with automated Modbus acquisition from three tri-axial laser sensors on a private VLAN, hands-free startup, live tolerance charts, and QR-traceable PDF reports on a remote server.

ADDITIONAL RELEVANT EXPERIENCE

Northampton Area School District - Computer / Network Technician | June 2016 - August 2019 | Built network infrastructure and deployed 750+ wireless access points across six school buildings; automated setup-data entry for 2,500+ Chromebooks with an Arduino-based tool; coordinated distribution with school administrators.

RJB.Engineering - Owner & Engineering Consultant | 2015 - Present | Deliver project-based engineering support for automotive clients and operate a small online store for printer heat inserts and accessories; produced plastic face shields during the COVID-19 pandemic.

EDUCATION & CERTIFICATIONS

Penn State University | B.S., Electro-Mechanical Engineering

December 2024

Certifications: MathWorks MATLAB, Simulink, Simscape, and Machine Learning Onramps (2026); Lean Six Sigma Yellow Belt and White Belt, Educate 360 (2025); Penn State Certificate in Engineering Design and Tools (2023); Lafayette College Mechanical Engineering Certificate (2019)
