

Riley Beenders

Lead, R&D Engineer

Bethlehem, PA | rileybeenders@gmail.com | [linkedin.com/in/riley-beenders](https://www.linkedin.com/in/riley-beenders) | github.com/RileyBeenders |

[RileyBeenders - MyFolio Project](#)

PROFILE

Lead R&D Engineer with prior CTO experience driving product development, prototype builds, manufacturing, and commercialization of complex automated systems. Skilled in BOM control, design-for-manufacturing, production workflow optimization, vendor coordination, and cross-disciplinary mechanical, electrical, firmware, and software integration. Experienced in translating engineering designs into reliable, manufacturable products and coordinating resources from development through production.

EXPERIENCE

Proteor / Proteor Printing Solutions

Lead, Research & Development Engineer

Coplay, PA • Jan 2025 - Present

Proteor acquired Filament Innovations in January, 2025 and my role evolved from CTO to Lead R&D Engineer. I continue to carry out my former CTO responsibilities, now with expanded oversight of the East Coast engineering team and involvement across Proteor's global product portfolio.

- Spearheaded the design and development of the ICARUS-Lite, a compact 3D printer for digital prosthetic and orthotic production, integrating custom AC heaters with dual-voltage 120/240 VAC capabilities that boosted internal production by 30%.
- Orchestrated the ICARUS-Lite lifecycle from product development through commercialization, coordinating manufacturing processes and build activities that increased revenue and enabled the creation of approximately five new roles.
- Engineered an automated LabVIEW system that captures nine data points every 15 ms from multiple laser sensors over Modbus, applying data analysis to chart tolerance data for internal quality control and end-customer reporting.
- Championed the implementation of Microsoft Business Central across the division's product portfolio, integrating ERP systems and data with global Proteor locations to streamline sales, inventory management, and supply chain logistics.
- Directed the rollout of ProteorPrint OS, a network-accessible remote operation and diagnostics interface with live video, AI-assisted alerts, and material-waste metrics, reducing equipment downtime and strengthening remote support.
- Conducted and documented comprehensive risk analyses covering safety, operational, and software risks for ICARUS and ICARUS-Lite products and the ProteorPrint cloud platform, implementing mitigations aligned with EU and U.S. standards.
- Partnered with another additive manufacturer to co-develop a reliable, cost-effective hotend optimized for our material's specific requirements.
- Collaborated with production, sales, and customer-service teams to sustain the product line, delivering hardware, electronics, motion-control, and software troubleshooting along with after-sales technical support that elevated customer satisfaction.
- Redesigned the Filament Innovations POSEIDON and ICARUS platforms from servo-driven ballscrews to a standardized linear-motor architecture, achieving 1-micron precision per 1 m/s while moving a 30 kg payload and reaching speeds up to 4 m/s.
- Advanced internal IT infrastructure by standardizing software and internal processes across the division, enhancing consistency and operational efficiency within Proteor.

Filament Innovations

Chief Technology Officer

Whitehall, PA • Jan 2023 - Jan 2025

Acquired by Proteor and is recognized globally as 'Proteor Print'.

- Oversaw the product-development pipeline, internal IT infrastructure, and technology strategy while retaining hands-on responsibility for mechanical, electrical, firmware, and software systems, coordinating cross-functional engineering and manufacturing activities.
- Led the design and launch of the Gen3 POSEIDON, combining a 1 m³ build volume, filament-and-pellet dual extrusion, braked NEMA 34 Z drives, industrial servo XY motion, and a custom gantry.
- Designed and hosted a redundant Kubernetes cluster for a self-developed ERP/CRM that managed orders, inventory, tasks, projects, and customer interactions, with dynamic Manufacturing Bill of Materials generation linked to purchasing, which cut order-processing time by almost 65% and increased inventory accuracy.
- Researched and developed high-speed linear motor systems that moved a 30 kg payload at 3 m/s with 3-micron accuracy; validated test results against performance targets, coordinated manufacturing with overseas suppliers, and supported deployment in upcoming ProteorPrint models.

Lead Electro-Mechanical Engineer

Whitehall, PA • Jun 2022 - Jan 2023

- Improved thermal and acoustic performance through enclosure redesign and component placement, including custom tooling with local fabricators for large-radius aluminum-panel bends.

- Integrated a multi-board CAN-bus control architecture that simplified wiring and debugging while supporting larger, modular machines.
- Developed independently testable electronics enclosures that could be installed in minutes and coordinated custom harnesses, panel designs, and hardware improvements with vendors.

Industrial Engineer

Whitehall, PA · Apr 2021 - Jun 2022

- Designed and released KRATOS, a machine that prints high-strength above and below-knee prosthetic sockets faster.
- Developed next-generation ICARUS and POSEIDON models with higher-performance components and expanded motion safety through NEMA 34 motors, planetary gearboxes, and power-failure brakes.
- Designed THE KRAKEN, a 1 x 2 x 1.5 m hybrid pellet-and-filament gantry printer for a client producing the world's largest 3D-printed statue, managing CAD, BOM control, sourcing, fabrication, assembly, firmware tuning, support, and training.

Engineering Technician

Whitehall, PA · May 2020 - Apr 2021

- Diagnosed mechanical and electrical problems during assembly and operation, improving early product reliability.
- Tuned, calibrated, and optimized print parameters while documenting design limitations and opportunities for product improvement.

RJB.Engineering

Owner & Engineering Consultant

Pennsylvania · 2015 - Present

- Deliver project-based engineering support for automotive clients utilizing CATIA and MATLAB.
- Produced 3D-printed plastic face shields using a custom designed printer, supplying local healthcare providers during the COVID-19 pandemic to meet urgent protective-equipment needs.

Blue Mountain Ski Resort

Ski Lift Operator

Palmerton, PA · Nov 2019 - Jan 2021

- Operated lifts and assisted thousands of guests with ticketing, weather, and slope information.
- Performed motor and control safety checks and supported the maintenance team during lift breakdowns.

Northampton Area School District

Computer / Network Technician

Northampton, PA · Jun 2016 - Aug 2019

- Assisted with my school district's network infrastructure, installing over 750 wireless access points across six school buildings, which increased Wi-Fi coverage and reduced connectivity issues.
- Accelerated deployment of more than 2,500 Chromebooks by developing an Arduino-based tool to automate setup-data entry.
- Managed the final distribution of devices with school administrators, creating detailed documentation and checklists that ensured all students received the correct equipment.

EDUCATION

Penn State University

Dec 2024

BS, Electro-Mechanical Engineering

CERTIFICATIONS

- MATLAB OnRamp: MathWorks | Issued July 2026
- Simulink OnRamp: MathWorks | Issued July 2026
- Simscape OnRamp: MathWorks | Issued July 2026
- Machine Learning Onramp: MathWorks | Issued July 2026
- Lean Six Sigma Yellow Belt: Educate 360 | Issued July 2025
- Lean Six Sigma White Belt: Educate 360 | Issued June 2025
- Certificate in Engineering Design and Tools: Penn State University | Issued Spring 2023
- Mechanical Engineering Certificate: Lafayette College | Issued Spring 2019

SKILLS

- **Engineering:** Design for Manufacturing, Electrical Layout and Schematic Design, Engineering Documentation and BOM Control, Manufacturing Bill Of Materials (MBOM) Management, Change Impact Analysis, Engineering Change Notices (ECNs) Implementation, Prototype Build Coordination, Build Scheduling, Supply Chain Logistics, Manufacturing Processes, ERP Systems, PLM Systems, MRP Systems, FDM, FGF, MJF and SLS Design, Fixture and Tooling Design, Product Development and Commercialization, Product Safety and Regulatory Compliance, Production Workflow Optimization, R&D Prototyping & Validation, Technical Writing and Documentation, Vendor Communication and Cost Negotiation, Worldwide Project Collaboration
- **Design & Software:** Autodesk Inventor, CATIA, Fixture and Tooling Design, Fusion 360, GitHub, LabVIEW, LM Studio, Macros, MATLAB, oMLX, Python, Rapid Prototyping, Siemens NX, SolidWorks, Visual Studio Code
- **Controls & Automation:** Allen Bradley PLCs, Data Logging and Process Analysis, Data Analysis, Git Version Control, Workflow Automation
